

June 20, 2019

The Honorable Frank Pallone
Chairman
Committee on Energy and Commerce
U.S. House of Representatives
Washington, D.C. 20515

The Honorable Greg Walden
Ranking Member
Committee on Energy and Commerce
U.S. House of Representatives
Washington, D.C. 20515

The Honorable Anna Eshoo
Chairwoman
Subcommittee on Health
Committee on Energy and Commerce
U.S. House of Representatives
Washington, D.C. 20515

The Honorable Michael Burgess
Ranking Member
Subcommittee on Health
Committee on Energy and Commerce
U.S. House of Representatives
Washington, D.C. 20515

Dear Chairman Pallone, Ranking Member Walden, Chairwoman Eshoo and Ranking Member Burgess:

On behalf of the Urgent Care Association (UCA), we commend you for your leadership to identify ways to fix surprise patient bills. Consistent with the goal of protecting patients from unexpected out-of-pocket costs, we ask that the “No Surprises Act” include standards of transparency for free-standing emergency

departments (EDs) to prevent surprise bills for patients who seek care in free-standing EDs. Improved transparency will also allow consumers to make more informed decisions on where to seek care.

While there are a number of factors that contribute to emergency department overuse, the lack of price and information transparency is a major contributor. Many consumers don’t understand the cost for accessing care in a free-standing or hospital emergency department, which both charge facility

Table 1. Rank by frequency, percentage of all visits, and mean prices of the most common diagnoses by provider type (2012 to 2015).*

Diagnosis and CCS Code	FSED			HMBD			UCC		
	Rank	%	Price, \$	Rank	%	Price, \$	Rank	%	Price, \$
Abdominal pain 251	3	6.6	3,466	1	5.7	2,875	17	3.6	173

*Cells are blank in cases in which a procedure is not in the top 20 for a facility type.

fees, will be far greater than the cost of accessing care for the same condition in the urgent care center or physician office.

A comparison, using insurance claims processed by Blue Cross Blue Shield of Texas from 2012 to 2015, of utilization, price per visit, and types of care delivered at free-standing EDs, hospital-based EDs, and urgent care centers found there is substantial overlap in the services provided across these sites of service.¹

What the Texas study found, as shown in the table above, was a 75 percent overlap in the 20 most common diagnoses at freestanding EDs versus urgent care centers and a 60 percent overlap for hospital-based EDs and urgent care centers. The out-of-pocket costs to patients, however, vary significantly for the same service depending on where it is provided. Prices for patients with the same diagnosis were on average almost 10 times higher at freestanding and hospital-based EDs relative to urgent care centers. What these findings demonstrate is that consumers are confused about what it costs to receive care in a free-standing or hospital emergency department versus an urgent care center.

States are beginning to respond. At the end of May, Texas Governor Greg Abbott signed a bipartisan bill (HB 2041)² that requires free-standing EDs to post notice that:

- the facility is a freestanding emergency medical care facility;
- the facility charges rates comparable to a hospital emergency room and may charge a facility fee;
- a facility or a physician providing medical care at the facility may be an out-of-network provider for the patient's health benefit plan provider network; and
- a physician providing medical care at the facility may bill separately from the facility for the medical care provided to a patient.

The legislation also requires the free-standing ED to either:

- list the health benefit plans in which the facility is an in-network provider in the health benefit plan's provider network; or
- state the facility is an out-of-network provider for all health benefit plans.

Under the legislation, free-standing EDs would also be required to provide a written disclosure statement to the patient or a patient's legal authorized representative that would, among other things, list the facility's observation and facility fees.

Similarly in Colorado, legislation was signed into law in 2018 aimed at helping health care consumers make informed decisions by requiring consumer transparency and disclosures by free-standing EDs.³ In its findings, the Colorado General Assembly pointed to evidence that utilization of free-standing EDs for non-emergency health care services significantly drives up health care costs for Colorado residents and that the top 10 reasons patients visited a free-standing ED were for non-emergency services.

The General Assembly responded by requiring free-standing EDs to post in the facility and provide patients upon registration written notice that it is an emergency medical facility that treats emergency medical conditions and that it is not an urgent care center or primary care provider (unless the facility also includes an urgent care center or clinic). After appropriate medical screening or stabilization, the free-standing ED must provide additional price information, including information regarding facility fees.

UCA believes that requiring this type of disclosure for all free-standing EDs is an immediate step that Congress can take to provide consumers with greater price information so they can make more informed health care decisions and avoid surprise bills.

We appreciate your consideration of our suggestions and look forward to continuing to engage in a dialogue with you and the Committee on reducing health care costs and how urgent care centers can be part of the solution. Should you require additional information, please contact Camille Bonta, UCA policy consultant, at cbonta@summithealthconsulting.com or (202) 320-3658.

Sincerely,

Laurel Stoimenoff, PT, CHC

Urgent Care Association

Richard Park, MD
President
Board of Directors Urgent Care Association

Since the early 1980s, urgent care centers have been providing care to patients throughout the United States. Adding roughly 500 new centers each year, the urgent care industry continues to grow and meet patient preference for on-demand access to affordable and convenient care. UCA benchmarking finds as of November 2018, the total number of urgent care centers in the United States reached 8,774, up eight percent from 8,125 in 2017, making them a health care site of service for an estimated 89 million patients annually.
